

Did you know?

eco Changes

for a greener tomorrow

Eco Changes represents Mitsubishi Electric's stance on environmental management, and our commitment to continuously strive for a greener tomorrow through cutting-edge global environmental technologies and our unique strengths in manufacturing. It expresses our efforts to join forces with our customers to change the global environment for the better.

Supporting these efforts is a culture that encourages each employee to proactively instigate positive changes, and that strives to create real improvements in product development, production and shipping, the lifecycle of our products, systems and services, and in recycling.

Mitsubishi Electric is a global leader in the research, manufacturing and marketing of innovative display solutions for today's commercial world. In our efforts to continually minimise our impact on the environment, our latest solutions have been designed to be more ecological without compromising on quality or performance.

Striving to reduce environmental impact: Mitsubishi Electric's visual information systems

Our digital signage solutions for business, education and retail are manufactured using recyclable materials, and all feature a scheduling function that helps reduce energy consumption.

Our projectors can be operated in 'eco mode', reducing power consumption and helping to minimise carbon emissions.

Our DLP™ LED Display Wall solutions reduce the number of lamps that need replacing, making them a cost-effective choice for control room applications.

Our dual lamp system makes possible continuous operation of up to 4000 hours, and will switch lamps automatically in the event of failure. Lamps can be cycled to improve lamp life even further.
