MITS1183-ODT6-ISE2012-EN

For Immediate Release - January 23, 2012

Mitsubishi Electric launches new outdoor LED screen **Mitsubishi's ground-breaking ODT6S is a compact, 6mm pitch, fan-less LED screen** **offering easy installation and exceptionally low cost of ownership.**

Mitsubishi Electric's ODT6S LED screen has been designed specifically to provide a competitively priced, high-quality outdoor screen that's easy to install and inexpensive to maintain.

The 6.7mm pitch 5000 cd/m² ODT6S uses a unique new waterproof 3-in-1 LED package developed by Mitsubishi for high reliability. Its simplified construction means that the panels are exceptionally slim at just 50mm, and very light at under 25kg. Installation can be accomplished quickly and easily without the need for heavy lifting equipment.

The ODT6S modules use a specially developed heat sink to keep the lighting modules cool without the need for cooling fans. The fan-less construction means they are totally silent in operation, require no air filters and very little maintenance to ensure years of trouble-free operation. The lightweight construction, slim profile and low cost of ownership of the ODT6S, combined with its exceptional build quality, makes it the ideal choice for outdoor applications such as digital signage and public display.

The ODT6S screen is controlled by Mitsubishi's XCS-3000 compact screen controller, offering a simple and cost-effective solution for digital signage type applications. Visitors to ISE 2012 will be able to see the ODT6S demonstrated, along with other digital signage products from Mitsubishi, including the new Play-Out composer system and a full range of high-quality LCD displays designed specifically for indoor digital signage and advertising applications.
